Survival in the Environment

The habitat is an area of the environment. A habitat is in an environment but an environment is not always a habitat. A habitat is always has life in it, where an environment does not necessarily have life in it. A habitat is always a Preference of one species, where as an environment could be a Preference of many species that could eventually become many habitats usually, the environment governs the Properties of a habitat, but not vice versa.

Survive in the Environment

Habitat vs Environment

A. The Habitat is an area of the Environment. A Habitat is in a environment but an environment is not always a habitat.

A. A habitat always has life in it. Whereas the environment does not necessarily have life in it.

A. A habitat is always a preference of one species, Whereas an environment could be a preference of many species that could be eventually become many habitat.

A. Usually, the environment governs the properties of a habitat, but not

Vice versa.
